

Albert Tamayev

New York, NY • albert.tamayev@pursuit.org • <https://www.linkedin.com/in/albert-tamayev/>

Software Development Manager

Engineering leader with 20+ years of global experience scaling ML-driven data, catalog, and metadata platforms across e-commerce and FinTech. Deep expertise in applied ML/NLP, semantic search, schema and metadata systems, and financial compliance (KYC/AML). Partner with executive stakeholders and lead cross-functional teams to deliver measurable gains in data quality, operational efficiency, and customer experience.

Skills & Competencies

Engineering Leadership | People Management | Critical Thinking | Complex Problem Solving | Judgment and Decision Making | Strategy & Roadmapping | Machine Learning & Applied Science (NLP, Semantic Search, Entity Resolution, GenAI/LLM/RAG) | Metadata Platforms & Schema Design | Data Quality | AWS (S3, EC2, DynamoDB, EMR, Lambda, KMS, CloudWatch) | Distributed Systems & Service Architecture | Infrastructure & Security | Agile / SDLC / CI-CD | SQL Server & Relational Databases | Person & Company Name Matching

Experience

AMAZON, New York

March 2020 - January 2026

Software Development Manager

Lead engineering teams building ML-driven metadata platforms for Amazon's global catalog with over 4B products. Own strategy, architecture, and delivery of automated systems improving schema completeness, catalog quality, and search discoverability. Partner with Product, Science, and Operations to deliver measurable business impact while driving org growth and operational excellence.

- Led ML metadata platforms for 4B+ products increasing GV-weighted attribute coverage 17% to 90%.
- Automated metadata discovery/onboarding, 95% manual effort reduction and 75% lower ops overhead.
- Improved metadata quality, increasing conversions, customer engagement, and ad relevance across core retail surfaces.
- Rebuilt attribute onboarding infrastructure, reducing from ~3 months to 1 day, accelerating launches and monetization.
- Improved product classification accuracy via product type reassignment, reducing misleading placements by 85%.
- Strengthened schema quality by fixing 10K+ defective and missing attributes, improving search relevance and detail pages.

OPUS, New York

March 2016 - March 2020

Chief Technology Officer — January 2019 – March 2020

Defined and executed technology strategy for Compliance and Reference Data products. Led platform modernization and ML adoption to improve scalability, accuracy, and delivery speed. Partnered with business leadership to align engineering execution with growth, customer needs, and operational efficiency.

- Created technology roadmap across Compliance and Reference Data, faster delivery of customer-facing features.
- Launched ML/NLP-based KYC/AML screening, improved risk detection accuracy, scalability, and enterprise readiness.
- Transformed platforms with AWS and CI/CD, higher reliability, fewer release bottlenecks, and faster time-to-market.
- Modernized data and ML architecture, enabled scalability, lower operating costs, and long-term enterprise growth.

Head of Engineering — March 2016 – January 2019

Led global engineering delivery for Compliance, Reference Data, and Business Research platforms. Managed distributed teams across the US and UK, modernized development practices, and scaled mission-critical compliance systems to support enterprise customer growth, performance, and regulatory reliability.

- Led and scaled a 20+ engineer distributed org, delivering Compliance, Reference Data, and Business Research platforms.
- Implemented Agile delivery and modern testing → improved code quality, release predictability, and on-time delivery.
- Built batch screening systems for 500+ enterprise customers, enabling daily adverse news, sanctions, PEP monitoring.
- Redesigned core systems → 10× performance gains and 5× transaction volume growth, supporting revenue expansion.

ADDITIONAL RELEVANT EXPERIENCE

ALACRA, New York

March 2002 - March 2016

VP, IT Operations — March 2009 – March 2016

Led IT operations, infrastructure, DevOps, and security across multiple data centers. Owned budgets, large-scale migrations, and governance programs to ensure high availability, regulatory compliance, scalability, and cost efficiency for enterprise platforms.

- Managed \$3M+ budget and multi-data center infrastructure supporting high-availability enterprise platforms.
- Implemented disaster recovery and security governance → 100% audit compliance with minimal service disruption.
- Led data center migrations → 50% cost reduction and 2× capacity growth, enabling customer and platform scale.

Software Development Manager — March 2005 – March 2009

Led engineering teams building large-scale data ingestion, analytics, and API platforms for financial services. Owned system design, delivery, and team execution for platforms supporting research, compliance, and investment banking workflows.

- Owned end-to-end execution of platforms supporting research, compliance, and investment banking use cases.
- Delivered foundational data platforms enabling future compliance, reference data, and analytics product growth.

Software Engineer — March 2002 – March 2005

Designed and built data-driven applications and databases for financial services platforms. Implemented core architectures, third-party integrations, and workflows to process and store structured data on public and private companies.

- Developed data ingestion pipelines, APIs, and enterprise databases for large-scale financial datasets.
- Implemented third-party data feeds and processing workflows for structured company information.
- Built systems powering research tools, pitch books, and client intelligence used by investment banking teams.

BLOOMBERG, New York

Software Engineer

Worked on Bloomberg's ticker systems, building infrastructure to ingest, process, and store high-volume intraday pricing data from global financial exchanges. Supported real-time market data used by Bloomberg's global customer base.

Patents

Relevance-based schema matching for targeted catalog enrichment, U.S. Patent **12,020,297** (granted June 2024, Amazon)

API for accessing and amalgamating data from incongruent sources, U.S. Patent **11,640,409** (granted May 2023, Opus Global)

Education

MS Information Systems

New York University, New York, NY

BA Computer Science, Mathematics

New York University, New York, NY
